mouse population that was killed by each successive dosage of the toxin, then use those graphs to determine the LD50 of each compound.

~~LD50 Toxicity Analysis Graphing Activity~~

LD50 is the term for "lethal dose at which 50% of the animals die". This measurement is used by the Environmental Protection Agency to measure the acute toxicity pesticides, that is, how much in a single dose will cause injury or death. A small number for the LD50 means a small amount of the chemical is acutely toxic.
