In times of pandemic, fiscal policy is key to save lives and protect people. Governments have to do whatever it takes. But they must make sure to keep the receipts. The Fiscal Monitor shows how policymakers can offer emergency lifelines to: save lives; protect people from losing jobs and incomes, and companies from bankruptcies; and enable a ...

Fiscal Policies to Contain the Damage from COVID-19 – IMF Blog

Fiscal Multiplier: The fiscal multiplier is the ratio of a country's additional national income to the initial boost in spending that led to that extra income.

Fiscal Multiplier Definition - Investopedia

The government has put in place a package of fiscal measures to address the crisis, detailed in their Stability Program and the July 2020 Monitoring Committee Report, with an estimated budget impact of €16.4 bn (about 3.4 percent of GDP), together with some €52 bn (about 12 percent of GDP) of loan guarantees. Key measures include: (i) boosting health expenditure and hospital funding; (ii) ...

Database of Fiscal Policy Responses to COVID-19 - IMF

Supporting the recovery with fiscal tools while managing higher government debt levels is a delicate balancing act. The pandemic and its economic fallout, along with policy responses, have contributed to a major increase in fiscal deficits and government debt ratios. As the pandemic abates and the economy recovers, government debt ratios are ...

Fiscal Policies for the Recovery from COVID-19 – IMF Blog

In addition, the estimated values of the parameters characterizing the two fiscal policy rules indicate that the fiscal authority reacts modestly to debt-to-output ratio. Specifically, the parameter governing the response of consumption tax to debt-to-output ratio (τ_c) registered estimated values of 0.20 and 0.10, respectively for models 1 and 2.

Macroeconomic impact of fiscal policy in Ghana: Analysis ...

Abstract. In this paper, we revisit the effects of government spending shocks on private aggregate consumption within an estimated New-Keynesian DSGE model of the euro area featuring non-Ricardian households and a relatively detailed fiscal policy set up. Employing Bayesian inference methods, we show that the presence of non-Ricardian households is in general conducive to raising the level of aggregate consumption in response to government spending shocks when compared with the benchmark ...
