Flood Estimation Handbook

The Flood Estimation Handbook is a set of five printed volumes (Centre for Ecology & Hydrology, 1999, ISBN:

9781906698003), priced from £260. Volumes from the set are not available individually. Wallingford HydroSolutions sell and support the Flood Estimation Handbook and its related software.

Flood Estimation Handbook | UK

Centre for Ecology & Hydrology

The Flood Estimation Handbook (FEH) gives guidance on estimating rainfall and river flood frequency in the UK and outlines methods for assessing the rarity of notable rainfalls or floods. The FEH is the industry standard for

estimating local flood risk and developing resilient infrastructure.

Improving the Flood Estimation Handbook (FEH) statistical ...
Flood Estimation Handbook This two day course will give you hands-on use of the Flood Estimation Handbook (FEH) methods. It covers all

the latest guidance and findings from research including the ReFH2 method, FEH13 design rainfalls, small catchments research and FEH Local guidance.

Flood Estimation Handbook | JBA Consulting Training Courses

Originally published in 1999, and subject to continuous development, the Flood Estimation Handbook (FEH) comprises the standard methods for estimating flood frequency. There are two core handbook methods: the statistical method for estimating flood

frequency curves implemented through WINFAP 4; and

The Flood Estimation
Handbook was
published in 1999
and replaces the FSR.
It is based on the
percentage runoff
equation:
{\displaystyle PR=0.8
29PIMP+25SOIL+0.07
8UCWI-20.7} where

PR is percentage runoff, PIMP is percentage imperviousness of the catchment, SOIL is the soil index and UCWI is urban catchment wetness index.

The Flood Estimation Handbook and related software offer guidance to those engaged in rainfall and flood frequency estimation in the UK. Despite careful preparation, this first edition may contain typographical or other errors that affect use of the procedures and/or

the numerical values obtained.

The revitalised FSR/FEH rainfall-runoff method

The Flood Attenuation by Reservoirs and Lakes (FARL) index, developed for the Flood Estimation Handbook, provides a guide to the degree

of flood attenuation attributable to reservoirs and lakes in the catchment above a gauging station.

FEH Catchment Descriptors | National River Flow Archive

The FEH Web Service provides catchment descriptors and rainfall data to

support the methods outlined in the Flood Estimation Handbook (FEH) for estimating floods. Detailed and context-rich mapping helps you identify and define catchments quickly, and rainfall data is available from the FEH 1999 and FEH 2013 rainfall models across the UK.
