Developments in Graphical Processing Units (GPUs), which are rapidly replacing more traditional DSP systems. FPGA-based Implementation of Signal Processing Systems, 2nd Edition is an indispensable guide for engineers and researchers involved in the design and development of both traditional and cutting-edge data and signal processing systems.

Digilent 's latest FPGA board, the Eclipse Z7, (195-3771) is an embedded measurement system that can provide the solution to the signal processing applications. Eclipse Z7 is ideal for high-speed instrumentation, control, and measurement systems for edge-computing, medical, and communications applications.

FPGA-based Implementation of Signal Processing System

FPGA-based Implementation of Signal Processing Systems is an important reference textbook for practising engineers and researchers working on the design and development of DSP systems for radio, telecommunication, information, audio-visual and security applications. Senior level electrical and computer engineering graduates taking courses in signal processing or digital signal processing shall also find this volume of interest.

Here, we demonstrate that by using OpenCL implementation, the FPGA can generate an I/Q chirp signal efficiently. Moreover, the same OpenCL kernel can be employed to generate different bandwidths of the chirp signal without having to reprogram the FPGA. To demonstrate the capability of the system, we generated the I/Q chirp signal from 1 MHz to 5 MHz, 5 MHz to 10 MHz, 10 MHz to 15 MHz and 15 MHz to 20 MHz for a period of 10 μ s.

FPGA-based Implementation of Signal Processing Systems, 2nd Edition is an indispensable guide for engineers and researchers involved in the design and development of both traditional and cutting-edge data and signal processing systems. Senior-level electrical and computer engineering graduates studying signal processing or digital signal processing also will find this volume of great interest.

OpenCL Implementation of FPGA-Based Signal Generation and Measurement. Abstract: Signal generation and measurement have been widely used in many engineering applications, such as for creating test signals in radar, communication, and software-defined radio. In field programmable gate array (FPGA) design, to generate and measure an analog signal, compatible software and hardware interfaces are required.
