Crash Course Biology #9 Lab 14. Genetics H-W population genetics lab Genetic Inheritance Lab Answers codominant traits. In this lab you will investigate how a combination of these genes works to. create an organism. Part 1 Procedure: 1. Flip a coin twice to determine the genotype for each trait and Page 7/32

record it in the data table. Heads = allele 1, Tails = allele 2 (Example: if you flipped heads twice, your monster.

Since meiosis was covered in the previous lab, we won't review the process in much detail other than to remind you of several key points that pertain to genetic inheritance: 1) Diploid organisms have two of each chromosome type, one haploid set of chromosomes inherited from the mother (maternal chromosomes) Page 12/32

and another haploid set inherited from
