The idea of a proof is to make a universal statement - for example, you don't just want to say that the angles in some triangles add up to 180\degree 180°, you want to say that the angles in all triangles add up to 180\degree 180°. This is a proof you actually do have to know, and you can see it here (interior and exterior angles revision)

We know that in an isosceles triangle, the base angles are equal. This means we can form the equation:  $x^\circ + x^\circ + 50^\circ = 180^\circ$ .  $x^\circ + x^\circ + 50^\circ = 180^\circ$ .  $2x^\circ + 50^\circ = 180^\circ$ .  $2x^\circ = 180^\circ - 50^\circ$ .  $2x^\circ = 130^\circ$ .  $2x = 130$ .  $x = 65$ .

Geometry unit 2 parallel lines and transversals worksheet answers. Lines are cut by a transversal then the alternate interior angles are congruent. If 2 lines are cut by a transversal so that alternate interior angles are congruent then the lines are parallel. When a line intersects two or more lines the angles formed at the intersection points create special angle pairs.

One method of proving statements and conjectures, a paragraph proof, involves writing a paragraph to explain why a conjecture for a given situation is true. Paragraph proofs are also called informal proofs, although the term informal is not meant to imply that this form of proof is any less valid than any other type of proof.
