Template Preparation Protocols. This guide describes an optimized procedure for preparing your DNA template for sequencing on the PacBio System. This Blunt-End Ligation protocol, is suitable for all libraries (greater than 250 bp amplicons) and offers a total preparation time of approximately four hours.

[Guide - Pacific Biosciences Template Preparation and ...](#)

SMRTbell™ Template Preparation and Binding Steps. • Polish ends of fragments suitable for ligation • 5' overhangs are filled in by T4 DNA Polymerase • 3' overhangs are removed by T4 DNA Polymerase • T4 PNK phosphorylates the 5' hydroxyl group • Repaired fragments can be ligated to blunt adaptors (recommended method) [Fragment DNA and Concentration.](#)

[Template Preparation - PacBio](#)

For template preparation, the SMRTbell™ Template Prep Kit is required. The kit includes, buffers, repair enzymes, ligase, exonucleases, hairpin adapters and sequencing primers. Kits are available in manual and high-throughput formats. For purification steps throughout the procedure, AMPure® PB beads are also required.

For PacBio library preparation, it is critical to determine the concentration of the double-stranded DNA, since only double-stranded DNA will be converted into sequencing templates. RNA, dNTPs, and single-stranded DNA included in the concentration measurement will skew the concentration reading.

[PACBIO® GUIDELINES FOR SUCCESSFUL SMRTbell LIBRARIES](#)

After size selection, each fraction was PCR-enriched prior to SMRTbell template library preparation. cDNA SMRTbell libraries were prepared using 1-3 µg of PCR enriched size-selected samples, followed by DNA damage repair and SMRTbell ligation using the SMRTbell Template Prep Kit 1.0 (Pacific Biosciences, Menlo Park, CA, USA). ... A second size selection was performed on the 3-6 kbp and 5-10 kbp fractions to remove short contaminating SMRTbell templates.

### METHODS AND COMPOSITIONS FOR NUCLEIC ACID SAMPLE PREPARATION

The Pacific Biosciences® library preparation process does not utilize amplification techniques and resulting library molecules are directly used as templates for the sequencing process. As such, the quality of the DNA starting material will be directly reflected in the sequencing results.

### PACBIO® PROJECT SUBMISSION RECOMMENDATIONS

The Pacific Biosciences Binding Calculator was used to determine the amount of primers and polymerase needed for the binding reactions, based on an insert size of 4500 bp. The primers and Pacific Biosciences proprietary p6 SA DNA polymerase v2 were bound to the library and then the MagBead Kit (Pacific Biosciences) was used to bind the library ...

### SMRT Gate: A method for validation of synthetic constructs ...

The PacBio DNA template prep kit 1.0 was used for the SMRTbell sequencing template preparation in every case. SMRTbell libraries were bound to polymerases by using the DNA/polymerase binding kit P6 (P/N 100-356-300) and v2 primers.

### Long-Read Sequencing Reveals a GC Pressure during the ...

Wall Street brokerages expect Pacific Biosciences of California, Inc. (NASDAQ:PACB) to post sales of \$23.23 million for the current fiscal quarter, Zacks reports. Three analysts have issued estimates for Pacific Biosciences of California ' s earnings. The lowest sales estimate is \$22.45 million and the highest is \$24.24 million. Pacific Biosciences of California posted sales of \$27.93 [...]

### \$23.23 Million in Sales Expected for Pacific Biosciences ...

Pacific Biosciences sequencing libraries were generated from pooled PCR amplicons and sequenced on Pacific Biosciences RS following manufacturer ' s recommendations. The 2000 bp amplicons were sheared to ~250 bp in size prior to library construction following manufacturer ' s recommendations (Pacific Biosciences).

### Pacific biosciences sequencing technology for genotyping ...

Massive parallel sequencing or massively parallel sequencing is any of several high-throughput approaches to DNA sequencing using the concept of massively parallel processing; it is also called next-generation sequencing (NGS) or second-generation sequencing. Some of these technologies emerged in 1994-1998 and have been commercially available since 2005.
