GUIDANCE FOR PRE- and POST-TEST DESIGN. The simplest evaluation design is pre- and post-test, defined as a before & after assessment to measure whether the expected changes took place in the participants in a program. A standard test, survey, or questionnaire is applied before participation begins (pre-test or baseline), and re-applied after a set period, or at the end of the program (post-test or endline).

POST has refined K-9 guidelines which have been in use for more than a decade. Recognizing that agencies now use canines in specialized capacities, POST has determined that it would not attempt to standardize all functions. Instead, these guidelines recommend minimum training and evaluation benchmarks for K-9 Patrol and detection functions.

POST Publications and Guidelines

The initial ERAS protocol is based on 20 primary principles divided between the pre-, intra-, and post-operative periods. One of the overarching guidelines is that these all of these steps require the involvement of the entire multi-disciplinary team.
