Honeycomb Technology is a guide to honeycomb cores and honeycomb sandwich panels, from the manufacturing methods by which they are produced, to the different types of design, applications for usage and methods of testing the materials. It explains the different types of honeycomb cores available and provides tabulated data of their properties.

HexWeb® aluminum honeycomb is also used for its excellent energy absorption characteristics, for example in automotive crash test barriers. Hexcel's industrial honeycomb HexWeb® A10 is a formable and flame-resistant honeycomb made from resin coated Aramid paper.

Weights of honeycomb sandwich composite structures are strictly controlled in scenarios such as in contexts of aerospace engineering. However, such structures extensively studied in past investigations were partly or completely made of aluminum or other metallic materials.

Mechanical responses of a composite sandwich structure ...

Honeycomb is a lightweight core material which is available in a variety of cell sizes and densities, providing a wide range of mechanical and thermal properties. HexWeb® honeycomb provides a unique structure made from a variety of web materials including fiberglass, aluminum, and aramid/para-aramid mechanical papers.
