Identifying Vertebrates Using Dichotomous Key

A dichotomous key is a tool that helps to identify an

unknown organism. A dichotomous key is a series

statements consisting of 2 choices that describe

characteristics of the unidentified organism. The user has to

make a choice of which of the two statements best describes

the unknown organism, then based on that choice moves to

the next set of statements, ultimately ending in the identity

of the unknown.

Vertebrate Classification Dichotomous Key Example

Vertebrates; Using a Dichotomous Key . Objectives . 1.

Recognize key characteristics of vertebrate organisms in

Phylum Chordata. 2. Correctly classify vertebrate specimens

to the correct Class. 3. Become familiar with identification

keys. 4. Learn to use a dichotomous key to correctly identify

unknown organisms. Introduction

Key

A dichotomous key can be used to easily identify unknown organisms. The word dichotomous comes from two Greek words that together mean, "divided in two parts". A dichotomous key consists of a series of two-part statements that describe characteristics of organisms. At each step of a dichotomous key the user is presented with two choices.

Identifying Vertebrates Using Dichotomous Key

A dichotomous key is a tool that allows the user to determine the identity of items in the natural world, such as trees, wildflowers, mammals, reptiles, rocks, and fish. Keys consist of a series of choices that lead the user to the correct name of a given item. "Dichotomous" means "divided into two parts". Therefore, dichotomous keys always give two choices in each step.

series of questions. When one question is answered, the key directs the user as to what question to ask next.

Dichotomous keys typically stress identifying species by their scientific name, as each individual species has a unique scientific name.

Dichotomous Key: Definition, Uses, Examples | Biology ...

A simple dichotomous key used to identify groups of vertebrates is provided. An organism that has no fur or feathers but is covered in dry scales is discovered. Using this dichotomous key, determine which group it is most likely to belong to.

Lesson Worksheet: Dichotomous Keys | Nagwa

Students and professionals use the dichotomous key to identify and classify objects (i.e. people, animals, plants, bacteria, etc.) into specific categories based on their characteristics. It ' s the most commonly used form of classification or type of identification key used in biology as it simplifies identifying unknown organisms.

What is a Dichotomous Key | Step-by-Step Guide with ...

Each student picks their own animal and they must identify the animal using the Invertebrate Dichotomous Key. When they have identified their animal, they can make a double bubble map comparing and contrasting their animal with a different animal from a classmate. Or, they can follow the directions on the worksheet to create a poster using researched information about the organisms.
