Abstract. A case where a 28-year-old woman presented in labor complicated by mitral stenosis is described. Mitral stenosis is the most commonly encountered valvular lesion in pregnancy. CASE DESCRIPTION. A 28-year-old woman from Mexico, G2 P1001 at 36 weeks' gestation, presented to labor and delivery with uterine contractions.

Labor complicated by mitral stenosis. Grant EN(1), Williams KC, Perez BJ. Author information: (1)Department of Anesthesiology and Pain Management, The University of Texas Southwestern Medical Center, Dallas, Texas. A case where a 28-year-old woman presented in labor complicated by mitral stenosis is described.

~~Labor complicated by mitral stenosis.~~

Mitral stenosis (MS) is the most commonly encountered valvular lesion in pregnancy , with the leading cause being attributed to rheumatic heart disease . Patients with MS do not tolerate the physiologic changes of pregnancy well, and it is not uncommon for MS to become unmasked for the first time during pregnancy .

Mitral stenosis. Mitral stenosis (MS), the most common manifestation of rheumatic heart disease, remains the most common acquired valvular lesion in pregnant women and the most common cause of maternal death from cardiac causes worldwide. 8, 18 Although mortality remains low in women from developed societies, the rate of fetal morbidity, including fetal growth restriction and preterm birth, rises with the severity of MS from 14% in pregnant patients with mild MS, to 28% and 33% in ...

~~Pregnancy Complicated by Valvular Heart Disease: An Update ...~~

Mitral stenosis is the most commonly acquired valve lesion encountered in pregnant women and is almost invariably caused by RHD. Pregnancy and the peripartum period represent a physiologic burden that may worsen symptoms in even moderate degrees of cardiac disease. Consequently, many women are first diagnosed with cardiac disease during pregnancy. The need to provide labor analgesia or anesthesia for a Cesarean section to a woman with cardiac disease is not infrequent and can be challenging.

~~Case Scenario: Cesarean Section Complicated by Rheumatic ...~~

Causes of mitral valve stenosis include: Rheumatic fever. A complication of strep throat, rheumatic fever can damage the mitral valve. Rheumatic fever is the most common cause of mitral valve stenosis. It can damage the mitral valve by causing the flaps to thicken or fuse. Signs and symptoms of mitral valve stenosis might not show up for years.

~~Mitral valve stenosis — Symptoms and causes — Mayo Clinic~~

Mitral stenosis is a valvular heart disease characterized by the narrowing of the orifice of the mitral valve of the heart. It is almost always caused by rheumatic valvular heart disease. Normally, mitral valve is about 5 cm² during diastole. Any decrease in area below 2 cm² causes mitral stenosis. Early diagnosis of mitral stenosis in pregnancy is very important as the heart cannot tolerate increased cardiac output demand as in the case of exercise and pregnancy.

~~Pregnancy Complicated by Valvular Heart Disease: An Update~~

In MS, the stenotic mitral valve restricts diastolic left ventricular filling, resulting in an elevated transmitral gradient and left atrial pressure that are further increased by the physiologic hypervolemia and increased heart rate during pregnancy, thereby increasing the risk of pulmonary congestion or pulmonary edema (figure 1).
