An LED lamp or LED light bulb is an electric light for use in light fixtures that produces light using one or more light-emitting diodes (LEDs). LED lamps have a lifespan many times longer than equivalent incandescent lamps, and are significantly more efficient than most fluorescent lamps, with some LED chips able to emit up to 303 lumens per watt (as claimed by Cree and some other LED manufacturers).

Red Light: More red light tends to induce more biomass growth and stretching. Red light is often applied to bulk up plants in early development or to stretch plants when longer internodal spacing is desired. Blue Light: Higher ratios of blue light are a powerful tool for improving plant quality. Improvements to biochemical processes often occur when more blue light is present, resulting in better nutrition, color, root development, and overall quality.
