In Math on Trial, mathematicians Leila Schneps and Coralie Colmez describe ten trials spanning from the nineteenth century to today, in which mathematical arguments were used -- and disastrously misused -- as evidence. They tell the stories of Sally Clark, who was accused of murdering her children by a doctor with a faulty sense of calculation; of nineteenth-century tycoon Hetty Green, whose dispute over her aunt's will became a signal case in the forensic use of mathematics; and of the case ...

Mathematical calculations have been used in the courtroom to convict people of theft, treason, forgery, and even murder. But often, the math involved was wrong and innocent people were found guilty.

Math On Trial charts the ambivalent--occasionally disastrous--role that math has played in several classic and some recent legal cases. It vividly shows how the desire for 'scientific' certainty can lead even well-meaning courts to commit grave injustice.

Math on Trial tells the story of ten trials in which mathematical arguments were used and disastrously misused/as evidence. Despite years of math classes, most people (and most jurors) fail to detect even simple mathematical sophistry, resulting in such horrors as a medical expert's faulty calculation of probabilities providing the key evidence for a British mother's conviction for the murder of her two babies.

Rather, mathematical (usually probability) arguments are used in the trials reported as crucial evidence. Perplexed covers a wider range, and greater number, of situations, though there is overlap between the two books in the examples chosen. Trial treats a short list of examples introduced with a simple explanation of the probability (or sometimes statistics) involved.
