Millipedes (milli); Centipedes (Centi); Daisies (Deci); U ' r (Unit); Deck (Deca); Hector (Hecto); Killed (Kilo); Many (Mega). A metric prefix, or SI prefix, is a unit prefix that precedes a basic unit of measure, to indicate a decadic multiple or fraction of the unit.

~~Mnemonic devices for the prefixes of the metric system~~

In the metric system of measurement, designations of multiples and subdivision of any unit may be arrived at by combining with the name of the unit the prefixes deka, hecto, and kilo meaning, respectively, 10, 100, and 1000, and deci, centi, and milli, meaning, respectively, one-tenth, one-hundredth, and one-thousandth. SI prefixes are an alternative to the scientific " powers-of-ten " notation.

There are many metric-unit prefixes, some are kilo, hecto, deka, deci, centi, milli and so on. The below metric units conversion calculator helps you to convert from one unit to another unit. Just enter the values in the required field to get the conversion. Example: How many milli is equivalent to 5 kilo. Solution: 1 kilo = 1000000 milli 5 ...

[Hecto—Wikipedia](#)

Convert among units for any base unit of measure such as gram or meter or second or byte, etc. For example, if you want to convert from meters to micrometers you would convert from "base unit" to micro. Likewise, if you want to convert from grams to micrograms or feet to microfeet you would still do a conversion from base unit to micro.
