About Power Technology Research. Too often is third-party market research disregarded by decision makers due to ambigious methodology and uninspired presentations. Our goal is to change that, and bring back pro-active decision making within the global power and e-mobility sectors by providing market research based on a transparent and flexible methodology.

About Us | Power Technology Research

Power has become the gating factor in many designs below 40nm on a variety of fronts, ranging from leakage current at 28nm and 20nm, and again at 7nm; dynamic power. On top of that, there are related issues such as electromigration and electrostatic discharge.

Low Power Methodologies - Semiconductor Engineering

For Power factor improvement purpose, Static capacitors are connected in parallel with those devices which work on low power factor. These static capacitors provides leading component of load current) thus power factor of the load current (i.e. leading component neutralize or eliminate the lagging component of load current) thus power factor of the load circuit is improved.
