Rosemont, Ill. (May 27, 2020) – Minimally invasive surgery (MIS) is a technique used by foot and ankle orthopaedic surgeons to correct specific foot and ankle conditions with very small incisions.

## ~~What Is Minimally Invasive Foot and Ankle Surgery?~~

Minimally Invasive Surgery of the Foot and Ankle represents a novel approach to treatment of orthopedic problems in the foot and ankle. The gradual change of philosophy in the management of foot and ankle surgery means that patients require a less invasive approach to surgery and a consequent improvement in recovery time.

## ~~Minimally Invasive Surgery of the Foot and Ankle ...~~

Minimally Invasive Surgery: Foot & Ankle. Minimally Invasive Surgery, or Minimal Incision Surgery (MIS) is always of interest to patients and surgeons alike. This less invasive type of surgery can result in better cosmetic results, quicker recovery times and less post-operative pain. However, there can also be severe complications related to Minimal Incision Surgery if attempted for the wrong condition or procedure.

## ~~Foot and Ankle Surgery Minimally Invasive or Minimal ...~~

Minimally Invasive Foot & Ankle Surgery. Arthroscopy is a type of surgery that uses a miniature camera (arthroscope) and surgical tools to examine and/or repair the tissues inside or around your ankle or other joints in your foot. This minimally invasive surgery enables the foot and ankle surgeon to detect any problems and make repairs without needing to make large incisions in the skin and through tissue.
