557 model you may have a recirculation region at the burner level but in this

case the particle rotation is more than  $2/3$ . Our

opinion is that the latter case is not typical for a real tangential furnace.

This single-stage gas furnace boasts an AFUE rating of 95 percent. The system has two heat exchangers and a tightly sealed blower

compartment. This natural-gas furnace is dual-fuel capable and can pair with a heat pump for peak efficiency. ML193.

# Acces PDF Modelling Of

Another economical furnace, this model does not compromise on performance or efficiency. The natural-gas furnace has an AFUE rating of 93 percent and uses two heat exchangers.
