Introduction One of the ways the modern world has defined itself is through the use of current. Today we cannot imagine a world without the use of light bulbs and electric cars. The concept of electricity comes through the principle of how materials exchange conduct current,voltage and resistance. In this lab we will explore the relationship between current and voltage.

Five Modern Physics Experiments. In January 2015, we at the University of Michigan began the process of creating an entirely new undergraduate physics lab to complement our junior?level lecture course in modern physics, a staple of essentially all physics programs at every institution. The rationale for this new offering is described below.

Five Modern Physics Experiments - LabWiki

In a physics laboratory experiment, a coil with 200 turns enclosing an area of 12 cm 2 is rotated in 0.040 s from a position where its plane is perpendicular to the earth's magnetic field to a position where its plane is parallel to the field. The earth's magnetic field at the lab location is 6.0 × 10-5 T. (a) What is the total magnetic flux through the coil before it is rotated?
