Mother-to-child transmission of HIV is also called perinatal transmission of HIV. The use of HIV medicines and other strategies have helped to lower the rate of mother-to-child transmission of HIV to 1% or less in the United States and Europe. (HIV medicines are called antiretrovirals.)

~~Preventing Mother-to-Child Transmission of HIV~~

Mother-to-child transmission of HIV The transmission of HIV from a HIV-positive mother to her child during pregnancy, labour, delivery or breastfeeding is called mother-to-child transmission. In the absence of any intervention, transmission rates range from 15% to 45%.

~~WHO | Mother-to-child transmission of HIV~~

HIV transmission from mother to child during pregnancy, labor and delivery, or breastfeeding is called perinatal transmission. Research published in 1994 showed that zidovudine (ZDV) given to pregnant women infected with HIV and their newborns reduce...

~~Mother-to-Child (Perinatal) HIV Transmission and Prevention~~

Perinatal HIV transmission refers to HIV transmission from mother to child during pregnancy, labor and delivery, or breastfeeding. It accounts for the majority of childhood HIV infections. However, since the mid-1990s, implementation of HIV testing and preventive interventions has resulted in a more than 90 percent decrease in the number of children perinatally infected with HIV in the United States, according to CDC.

~~Prevention of Perinatal HIV Transmission | NIH: National ...~~

The Perinatal Transmission Prevention Guideline Committee recommends that clinicians who provide medical care for pregnant patients with HIV follow the DHHS Recommendations for the Use of Antiretroviral Drugs in Pregnant Women With HIV Infection and Interventions to Reduce Perinatal HIV Transmission in the United States.

~~PERINATAL HIV CARE - AIDS Institute Clinical Guidelines~~

HIV transmission from mother to child during pregnancy, labor and delivery, or breastfeeding is known as perinatal transmission and is the most common route of HIV. These social media images contain updated data about HIV and pregnant women, infants, and children, and are available for sharing.

~~Pregnant Women, Infants, and Children | Gender | HIV by ...~~

Transmission of the human immunodeficiency virus (HIV) from mother to child can occur in utero, during labour or after delivery from breastfeeding. The majority of infants are infected during delivery. Maternal HIV-1 plasma viral load at delivery is the most important predictor of vertical transmission.

~~Prevention of perinatal HIV transmission during pregnancy ...~~

Women living with HIV were trained and skilled up as 'Mentor Mothers' to support other women living with HIV, around them. Each training has been delivered over 2 days. The trained 'Mentor Mothers' are then able to support expectant mothers (and those planning to conceive) to feel that they are in the driving seat in relation to these 4 issues.

We investigated the role of HLA-G polymorphism in perinatal HIV transmission in 348 ART naive mother-child pairs enrolled in a mother-child HIV transmission cohort, established in Nairobi, Kenya in 1986. Among the 348 children born to 266 HIV+ mothers, 258 were uninfected and 90 became infected perinatally.

~~HLA-G and mother-child perinatal HIV transmission ...~~

"Early detection of HIV infection in the mother and evaluation and management of infants exposed to HIV remain the key to preventing perinatal transmission," the study authors noted.

~~Perinatal Exposure to HIV Requires Specialized ...~~

HIV transmission from mother to child during pregnancy, labor and delivery, or breastfeeding is called perinatal transmission.

~~Mother-to-Child (Perinatal) HIV Transmission and~~

The possibility of transmission of the human immunodeficiency virus (HIV) from mother to child was identified very early after the onset of the epidemic, as early as 1983 . The infection of the child is characterized by a high risk of early and severe evolution with encephalopathy and death in the first 2 y of life . The mechanism of HIV transmission to the child during pregnancy is still hypothetical, based on indirect arguments, and probably not unequivocal.

~~Mini review: Prevention of mother-child transmission of ...~~

Elimination of Mother-to-Child HIV Transmission (EMCT) in the United States In collaboration with national experts and federal partners, the Centers for Disease Control and Prevention (CDC) has developed a new framework directed at the goal of eliminating mother-to-child (perinatal) HIV transmission (EMCT) in the United States.

~~Elimination of Mother-to-Child HIV Transmission (EMCT) in ...~~

When a mother with HIV passes the virus to her infant during pregnancy, labor and delivery, or breastfeeding (through breast milk). Antiretroviral (ARV) drugs are given to women with HIV during pregnancy and to their infants after birth to reduce the risk of mother-to-child transmission (MTCT) of HIV.

~~Perinatal Transmission | ClinicalInfo - HIV.gov~~

Perinatal, or mother-to-child HIV transmission happens when a pregnant person living with HIV passes HIV to their baby. It can happen during pregnancy, delivery, and through breastfeeding. Frequency of Perinatal HIV Transmission Without treatment, 25 to 30% of babies born to a mother living with HIV will get HIV.

~~Perinatal (Mother-to-Child HIV Transmission) - Minnesota ...~~

Overall, the rate of mother-to-child transmission of HIV in this cohort was very low (0.65%). The number of cases of mother-to-child transmission of HIV peaked in 1992 and subsequently declined, due in part to increased HIV testing and use of zidovudine prophylaxis . Four (33%) infected infants are presumed to have been infected in utero.

~~Missed Opportunities for Prevention of Mother-to-Child ...~~

Prevention of Mother-to-Child Transmission (PMTCT) Strategies used to prevent the spread (transmission) of HIV from a mother to her child during pregnancy, labor and delivery, or by breastfeeding (through breast milk).

~~Prevention of Perinatal Transmission | ClinicalInfo~~

The program for the prevention of mother-to-child transmission (PMTCT) of human immunodeficiency virus (HIV) was launched in 2003 in China, but few studies have been conducted to describe the panorama of PMTCT. We investigated the rate and associated factors of mother-to-child transmission (MTCT) in China from 2004 to 2018. HIV-infected pregnant women from two areas in China between 2004 and ...
