Municipal Solid Waste In A~~ Municipal solid waste (MSW) is the solid waste material commonly called "trash" or "garbage" that is generated by homeowners and businesses. Most state and/or federal rules permit landfills to contain either hazardous or nonhazardous wastes, but more than 95% of landfilling involves MSW.

~~Municipal Solid Waste—an overview | ScienceDirect~~ ~~Topics~~

Municipal solid waste, commonly known as trash or garbage in the United States and rubbish in Britain, is a waste type consisting of everyday items that are discarded by the public. "Garbage" can also refer specifically to food waste, as in a garbage disposal; the two are sometimes collected separately. In the European Union, the semantic definition is 'mixed municipal waste,' given waste code 20 03 01 in the European Waste Catalog. Although the waste may originate from a number of sources that

~~Municipal solid waste—Wikipedia~~

12.2.2 Municipal solid waste. MSW is solid waste resulting from, or incidental to, municipal, community, commercial, institutional, and recreational activities, and it includes garbage, rubbish, ashes, street cleanings, dead animals, medical waste, and all other nonindustrial solid waste. MSW is generated by households, offices, hotels, shops, schools, and other institutions.

~~Municipal Solid Waste—an overview | ScienceDirect~~ ~~Topics~~

Municipal Solid Waste (MSW)—more commonly known as trash or garbage—consists of everyday items we use and then throw away, such as product packaging, grass clippings, furniture, clothing, bottles, food scraps, newspapers, appliances, paint, and batteries. This comes from our homes, schools, hospitals, and businesses.

~~Municipal Solid Waste | Wastes | US EPA~~

Municipal solid waste includes commercial and domestic wastes generated in municipal or notified areas in either solid or semi-solid form excluding industrial hazardous wastes but including treated bio-medical wastes. Collection of municipal solid wastes

~~Municipal Solid Waste | SpringerLink~~

Trends in Solid Waste Management The world generates 2.01 billion tonnes of municipal solid waste annually, with at least 33 percent of that—extremely conservatively—not managed in an environmentally safe manner. Worldwide, waste generated per person per day averages 0.74 kilogram but ranges widely, from 0.11 to 4.54 kilograms.

~~Trends in Solid Waste Management—World Bank~~

Although municipal waste represents only around 10 % of total waste generated in the EU (Eurostat, 2016a and 2016b), it is very visible, and prevention of this waste has the potential to reduce its environmental impact not only during the consumption and the waste phases but also throughout the whole life cycle of the products consumed.
