Overhead Crane Design The overhead crane needs several components to lift loads, including the hoist. The design and loading of these equipment correspond to the needs of the job. A hoist is a machine composed of a system of pulleys that allow lifting a load exerting a force less than the weight to be moved.

Manual Overhead Crane Hoists. Manual hoists can be designed in either a chain or wire rope configuration, and are mainly used for occasional lifts where speed of the lift is not a factor. One chain is used to lift and lower the load and the other chain is used to support the load. The chain is pulled using a hand-over-hand motion, or a handheld lever or ratchet, to turn the gears located ...
