features. After you perform the basic configuration steps, you can use the rest of the topics in this ...

PAN-OS® Administrator's Guide - Palo Alto Networks

This document explains on how to transfer URL filtering objects from

one Palo Alto Networks firewall to another. Copying configurations between any two firewalls may be done in the following two ways. The same process may be applied for transferring other configurations like Anti-virus profiles, security policies and more.

How to Copy Configurations Between Firewalls

To enable clients on the internal network to access the public web server in the DMZ zone, we must configure a NAT rule that redirects the packet from the external network,

where the original routing table lookup will determine it should go based on the destination address of 203.0.113.11 within the packet, to the actual address of the web server on the DMZ network of 10.1.1.11.
