Phosphoric Acid: Purification, Uses, Technology, and Economics, the first and only book of its kind to be written on this topic, covers the development of purification technologies for phosphoric acid, especially solvent extraction, describing the more successful processes and setting this period in the historical context of the last 350 years. Individual chapters are devoted to the key derivative products which are still undergoing active development, as well as to sustainability and how to ...

The rise and rationalization of the industrial phosphates industry have gone hand in hand with the development and maturation of technologies to purify phosphoric acid. In the 1960s and 70s, driven by the exponential sales growth of the detergent-builder sodium tripolyphosphate, chemical producers raced to develop processes that would provide a suf

grade phosphoric acid using fertilizer grade acid is one of Prayon's specialities. The dearsenification and defluorination of the acid for manufacturing products to be used in animal feeds (such as MCP, DCP) can be achieved by sulfurising and steam-stripping fertilizer acid. These techniques form part of the portfolio of Prayon processes for transforming fertilizer grade acid into products with the highest level of added value.
