PILED- RAFT FOUNDATION FOR HIGH RISE INDUSTRIAL STRUCTURE
Abstract. A piled raft foundation comprises both piles and a pile cap that itself transmits load directly to the ground. The aim of such a foundation is to reduce the number of piles compared with a more conventional piled foundation where the bearing effect of the pile cap, or raft, is ignored. This paper describes a 'hybrid' approach for the analysis of piled raft foundations, based on a load transfer treatment of individual piles, together with elastic interaction between different ...

An approximate analysis procedure for piled raft foundations
Principal findings from the present study are: 1) The stiffness and the resistance of the single pile in piled raft foundations are different from those observed in the isolated single piles of the same size, due to the difference in the confining stress condition around the piles; 2) Piles play important roles in increasing horizontal ultimate resistance of piled raft foundations; 3) The initial horizontal stiffness of a piled raft is not always higher than that of a raft (alone) as the ...

Performance of piled raft foundations subjected to static ...
As a solution to the settlement problem of high-rise buildings, a number of piles are used and a new type of foundation - called a piled raft foundation - is coming up in a big way. In some designs, approach piles are used for reducing the settlement and a load is carried by raft only.

Simplified Design Method for Piled Raft Foundations ...
Abstract. A new simplified approach based on the pseudostatic method of analysis is proposed to investigate the response of a combined pile–raft foundation (CPRF) and a group pile considering the complex interaction. In this method, the raft is considered as a plate supported by group of piles and soil, where piles are modeled as Euler beam elements resting on elastic Winkler foundation and the raft is divided into square grids attached with horizontal springs.

Pseudostatic Approach to Analyze Combined Pile–Raft Foundation
Abstract. Load sharing of piled raft foundations is known as an economical design for deep foundations. Nevertheless, research in this area has been lagging because of the complexity of the problem and lack of field data. Numerical modeling can be used to provide valuable data with a high level of success. A three-dimensional finite-element model of a piled raft foundation was developed to simulate the case of a piled raft foundation.

3D Numerical Model for Piled Raft Foundation ...
International Journal for Numerical The piled-raft foundation systems have started to be a very popular design method that is commonly used for especially high-rise buildings. In this ...

(PDF) ISSMGE Combined Pile-Raft Foundation Guideline
Pile raft foundation behavior is evaluated with many researches and the effect of pile length; pile distance, pile arrangement and cap thickness are determined under vertical or horizontal static and dynamic loading. In the present paper the influence of pile length configurations on behavior of multi-storied are evaluated under vertical loading.

INTERNATIONAL JOURNAL OF SCIENTIFIC & TECHNOLOGY RESEARCH ...
If there are one or more ineffective piles, the raft can allow some degree of load redistribution to other piles, reducing the influence of the pile's weakness on the overall performance of the foundation. In an Unconnected Piled Raft Foundation (UCPRF), the piles are not directly connected to the raft, but are separated from it be a structural fill 'cushion' (such as a compacted a sand-gravel mixture or compacted soil) which redistributes load between the raft and piles. This can be a ...

Piled raft foundation - Designing Buildings Wiki
One of the Technical Committees of the International Society for Soil Mechanics and Foundation Engineering (ISSMFE) focussed its efforts in the period 1994–7 towards piled raft foundations, collected considerable informa- tion on case histories and methods of analysis and design, and produced comprehensive reports on these activities (O'Neill et al., 1996; van Impe & Lungu, 1996).

Piled raft foundations: design and applications
Abstract Disconnected piled raft (DPR) foundations have been widely adopted as an effective foundation system where the piles are separated from the raft by a granular layer, which can limit the shear forces and moments transmitted between the raft and the piles.

Horizontal Loading Tests on Disconnected Piled Rafts and a ...

Piled Raft Foundation International Journal Of Civil
Fig 1: Concept of piled raft foundation a) piles, b) raft, c) piled raft. International Journal of Advanced Engineering Technology E-ISSN 0976-3945 IJAET/Vol.III/ Issue IV/October-December, 2011/191-195. c) When the clay layer has intermediate strength, alternative (b) may not be feasible, as the bearing capacity may not be adequate, or settlements may be excessive, which may also cause distresses to adjacent structures.

BEHAVIOURAL STUDY OF PILED RAFT FOUNDATION IN LAYERED SOIL ...
Jun Yang. The original paper investigated the performance of piled raft foundations under vertical loading by three-dimensional (3D) FEM numerical simulation. The topic is interesting, and the findings on the effects of the key parameters governing the performance of this type of foundation are instructive. However, there are two serious issues that should be addressed and corrected, as discussed herein.

Behavior of Piled Raft Foundation on Heterogeneous Clay ...
The piled raft foundations are designed to support the structure against static and dynamic loads to satisfy the requirements for bearing capacity and maximum settlement. The raft is 78 m long, 53 m wide, and 1.8 m thick and made of reinforced concrete.

Influence of Variable Rigidity Design of Piled Raft ...
The foundation area is about 2900 [m2] founded on Frankfurt clay at a depth of 14.5 [m] under the ground surface. Raft thickness varies from 4.65 [m] at the middle to 3 [m] at the edge. A total of 40 bored piles with equal diameter and length, each 30 [m] length and 1.3 [m] in diameter.

Piled Raft Foundation for Seismic Performance of Tall ...
Over the past two decades, a number of researchers studied different aspects of the unconnected piled raft foundation (UPRF) system. In this system, a structural fill cushion is inserted between the raft and the concrete piles (PC) where the cushion transfers the loads from the superstructure to the piles. They showed that UPRF could increase the load-bearing share of the raft relative to that of the concrete piles, which leads to a favourable economic impact.
