Pipeline transport is the long-distance transportation of a liquid or gas through a system of pipes—a pipeline—typically to a market area for consumption. The latest data from 2014 gives a total of slightly less than 2,175,000 miles (3,500,000 km) of pipeline in 120 countries of the world. The United States had 65%, Russia had 8%, and Canada had 3%, thus 75% of all pipeline were in these ...

The transmission pipeline is a “ cross-country ” pipeline that is specifically designed to transport petroleum products long distances. The transmission pipeline collects the specific petroleum products from many “ supply ” sources along the pipeline (such as gathering pipelines) and “ delivers ” the product to one or more end users.
