Single Maths B Probability & Statistics: Exercises & Solutions. 1. QUESTION: Describe the sample space and all 16 events for a trial in which two coins are thrown and each shows either ahead or atail. SOLUTION: The sample space is $S = \{hh, ht, th, tt\}$. As this has 4 elements there are $2^4 = 16$ subsets, namely $\{hh, ht, th, tt, \{hh, ht\}, \{hh, th\}, \{hh, tt\}, \{ht, th\}, \{ht, tt\}, \{th, tt\}, \{hh, ht, th\}, \{hh, ht, tt\}, \{hh, th, tt\}, \{ht, th, tt\}$ and finally $\{hh, ht, th, tt\}$.

Single Maths B Probability & Statistics: Exercises & Solutions

Exercises a) A die is rolled, find the probability that the number obtained is greater than 4. b) Two coins are tossed, find the probability that one head only is obtained. c) Two dice are rolled, find the probability that the sum is equal to 5. d) A card is drawn at random from a deck of cards. Find the probability of getting the King of heart.

Probability Questions with Solutions

Math exercises on probability. What is the probability of winning the first, second and the third prize? Math-Exercises.com - Math exercises with answers.

Answers to Math Exercises & Math Problems: Probability

What is the probability that the shooters will hit the target a) at least once b) at least twice ? The probability that the bulb will work longer than 800 hours is 0.2. We have three bulbs in the hallway. What is the probability that after 800 hours of service at least one of them will still work ? In the lottery 6 numbers are drawn out of 49.

Practice Exercises for Probability | Math Goodies

Probability of an impossible event : $P(A) = 0$ Probability of a sure event: $P(A) = 1$ b) Conditional probability of some event A, given the occurrence of some other event B: c) Probability of two independent events: $P(A \cap B) = P(A)P(B)$ d) Probability of two mutually exclusive events: $P(A \cup B) = P(A) + P(B)$

Probability – examples of problems with solutions

FACTS AND FORMULAE FOR PROBABILITY QUESTIONS . 1. Experiment : An operation which can produce some well-defined outcomes is called an experiment. 2. Random Experiment :An experiment in which all possible outcomes are know and the exact output cannot be predicted in advance, is called a random experiment. Ex : i. Tossing a fair coin. ii.

Problems and solutions. Wiley (1970) (in the series Methuen's monographs on applied probability and statistics). 3. DAVID, F. N. and E. S. PEARSON. Elementary statistical exercises. Cambridge University Press (1961). My co-workers and degree candidates of the MSU Department of Probability Theory were of enormous help in choosing and formulating

Collection of problems in probability theory

The probability distribution of the random variable is the value of the random variable along with its corresponding probabilities. Properties of Probability Distribution. The probability distribution of a random variable is explained in Class 12 Maths Ch 13 NCERT solutions where X is $P(X = x_i) = p_i$ for $x = x_i$ and $P(X = x_i) = 0$ for $x \neq x_i$.

NCERT Solutions Class 12 Maths Chapter 13 Probability ...

NCERT Solutions for Class 12 Maths Chapter 13 Probability Ex 13.1. Ex 13.1 Class 12 Maths Question 1 Given that E and F are events such that $P(E) = 0.6$, $P(F) = 0.3$ and $P(E \cap F) = 0.2$ find $P(E|F)$ and $P(F|E)$. Solution: Ex 13.1 Class 12 Maths Question 2 Compute $P(A|B)$ if $P(B)=0.5$ and $P(A \cap B) = 0.32$. Solution: Class 12 Maths Probability Solutions

NCERT Solutions For Class 12 Maths Chapter 13 Probability

Introduction to Probability Exercise Problem Solution 1 Which of the following is an experiment? Tossing a coin. Rolling a single 6-sided die. Choosing a marble from a jar. All of the above. All of the above. 2 Which of the following is an outcome? Rolling a pair of dice. Landing on red. Choosing 2 marbles from a jar. None of the above.
