Acidic pesticides using QuEChERS method

Acidified QuEChERS (A-QuEChERS): The method corresponds to the EN 15662 procedure with the only difference being the use of 10 mL acetonitrile containing 1% formic acid instead of pure acetonitrile for extraction and of 4g  $\text{MgSO}_4$  and 1g NaCl (no citrate buffer salts) for partitioning. Shaking was conducted for 15 minutes using the

since the method presented recoveries between 70% and 118%, with RSD lower than 19% for spike levels between 10 and 100  $\mu\text{g L}^{-1}$ . The method limit of detection (LOD) and limit of quantification (LOQ) ranged from 3.0 to 7.6  $\mu\text{g L}^{-1}$  and from 4.9 to 26  $\mu\text{g L}^{-1}$ , respectively. The method developed was adequate for the determination of 74 pesticide residues in orange juice.

Optimization of a QuEChERS based method by means of ... treated extracts are acidified by adding a small amount of formic acid, to improve the storage stability of certain base-sensitive pesticides. The final extract can be directly employed for GC- and LC-based determinative analysis. Quantification is performed using an internal standard,

## Quechers Validation Method For Acidic Pesticides

The QuEChERS sample preparation method is a two step process originally developed for the extraction of acidic and basic pesticides from foodstuffs, 14 involving a liquid extraction (typically using acetonitrile) and a dispersive solid phase extraction (dSPE) using primary secondary amine (PSA), C18, and/or graphitized carbon black (GCB) sorbents to target the removal of abundant interferences (e.g. humic acids, lipids, etc).

An investigation of the utility of QuEChERS for extracting ...

## Read PDF Quechers Validation Method For Acidic Pesticides

QuEChERS approach is the most popular analytical technique for the multi-residue pesticide analysis. In addition to the original QuEChERS method, there are two buffered methods, CEN method 15662 and AOAC Official method. Both buffered methods performed well for multiresidue pesticides analysis in most commodities. AOAC method is better for

polar interferences (Anastassiades et al., 2003), ii) the dispersive AOAC 2007.01 method, in which a 1% acetic acid ACN solution is the extraction solvent and anhydrous sodium acetate ( $\text{CH}_3\text{COONa}$ ) buffer, to protect base sensitive analytes from degradation and provides ...

QuEChERS: A new sample preparation approach for the ... To achieve higher recovery of the analyte from the matrices, a modified QuEChERS method was used for sample preparation. The chromatographic separation was achieved using a Zorbax Eclipse Plus C18 RRHD column with a mobile phase comprising 5mM ammonium formate solution +0.1% formic acid (A) and acetonitrile +0.1% formic acid (B) in a linear gradient program.
