In practice, emissions from modern domestic microwave ovens are substantially below this international limit, and have interlocks that prevent people being exposed to microwaves while the oven is on.

Moreover, exposure decreases rapidly with distance; e.g. a person 50 cm from the oven receives about one one-hundredth of the microwave exposure of a person 5 cm away.

Is microwave radiation harmful?

Microwaves do, make no mistake, emit radiation, and the FDA has established what it considers "safe" levels for microwaves: over the machine's "lifetime" the allowable level is "5 milliwatts of microwave radiation per square centimeter...approximately 2 inches from the oven surface."

Microwave Safety: Are Microwave Ovens Safe?

Electromagnetic radiation - Electromagnetic radiation - Microwaves: The microwave region extends from 1,000 to 300,000 MHz (or 30 cm to 1 mm wavelength). Although microwaves were first produced and studied in 1886 by Hertz, their practical application had to await the invention of suitable generators, such as the klystron and magnetron.
