Over a 6-month summer/autumn period, the energy consumption and production levels of six different concrete-batching plants were audited. The average CO 2 emissions due to batching per cubic meter of concrete produced were found to be 0.0033 t CO 2-e/m 3. Fig. 1.4 shows the contributions of each energy source to the total CO 2 emissions.

Concrete-Batching—an-overview+ScienceDirect Topics
The stationary concrete batch plant is a productive unit to produce concrete for medium to large construction projects. Its production capacity ranges from 25m³/h to 240 m³/h. The plant is available with a range of options and auxiliary equipment to meet your needs. Stationary batching plant models for your reference

Ready-Mix-Concrete-Plant—Different-Types-of-Concrete—
Our concrete batching plants supply a range of products from floor screeds and foamed concrete to designed mixes for structural applications. Customers can choose to collect from the plant or have the concrete delivered by our fleet of mixer trucks. We offer a concrete pumping service with boom pumps ranging in size to 32m in Jersey and 27m in ...

Romez—Ready-Mixed-Concrete
Our new range of batching plants provides three great options for every precast concrete business. We have the Hydromix KS25, the Hydromix K9 and the Hydromix K12, with outputs ranging from 25m 3 /hour to 60m 3 /hour. The versatility of all the precast batching plants means that they can be operated as mobile units or they can operate as static ...
