experience in different dosage form development for both New Chemical Entity (NCE) as well as generic product development applying our technical skills, efficiency and quality consciousness to develop robust products. Our expertise lies in overcoming the challenges faced during formulation development and offer solutions to overcome flowability, solubility, wettability, dissolution, degradation, bioavailability issues encountered during development.

The efficacy of formulation was evaluated in patients by subjective assessment, gamma scintigraphic approaches, and confocal microscopy. Methods: Nifedipine-loaded different formulations such as sucrose bead, pellets, and microparticles (slugging method, ionotropic gelation, and chemical denaturation) were designed. The studies were performed on 50 subjects, of which 30 subjects were treated with optimized nifedipine loaded microcapsules while 20 subjects were given capsule

In the development of the co-transfer formulation, the nano-formulation exhibits good bioavailability and compatibility. For example, polymeric micelles (PMs) are self-assemblies of block copolymers providing numerous opportunities for drug delivery. Besides, the nano-encapsulated anticancer agent targeting specific tumor tissues can significantly optimize the therapeutic efficacy of the drug.
