RAWS- Long Term Care Version - dementiaresearch.org.au
The revised Algase wandering scale for long term care (RAWS-LTC) was created by Algase et al 14 to estimate the degree of wandering behavior in PWD in long-term care settings. This version was derived from a longer version of the Algase wandering scale. 15 The RAWS-LTC contains 3 subscales, including persistent walking, spatial disorientation, and eloping behavior, validated across earlier versions.

French Validation of the Revised Algase Wandering Scale ...
This paper reports on the Algase wandering scale (AWS), a 28-item questionnaire, based on five dimensions of wandering. With factor analysis, an eight-factor solution explained nearly 70 percent of the variance in ratings for 151 long-term care subjects and confirmed three of the structuring dimensions. Reliability of the AWS was examined for internal consistency and for inter-rater reliability.

The Algase Wandering Scale: initial psychometrics of a new ...
The AWS V2 includes 23 items as a wandering scale, and five other items for verifying reliability and validity. The scale is constructed from five subscales: PW, SD, EB, SH, and RW. The scale uses a four point ordinal scale for each item, and the total score ranges from 23 to 92. A higher score indicates more frequent wandering behavior.

Reliability and validity of the Algase Wandering Scale ...
In the United States the Alzheimer's Associationhas developed a program called "Safe Return", that includes assessment tools. An assessment tool designed for use in nursing homesis the Revised Algase Wandering Scale-Nursing Home Version(RAWS-NH); this tool may be suitable for use also in assisted living facilities.
