Selected Solutions, Section 5.1 1. Problem 8: Use the Ratio Test:  $\lim_{n \rightarrow \infty} \frac{(n+1)!|x|^{n+1}}{(n+1)^{n+1} n^n |x|^n} = |x| \lim_{n \rightarrow \infty} \frac{n+1}{n \ln n}$  In class, we talked about the technique where we exponentiate to use L'Hospital's rule:  $n^{n+1} n = e^{n \ln(n^{n+1})}$  so now we take the limit of the exponent:  $\lim_{n \rightarrow \infty} n \ln n^{n+1} = \lim_{n \rightarrow \infty} \ln n^{n+1}$  which is of the form  $0/0$ .

will go ahead and use  $y(x)$  in place of  $^{\circ}(x)$ . Technically speaking, these are not the same thing ( $^{\circ}$  is the series approximation to the true solution  $y$ ):  $y(0) = 1$   $y_0(0) = 0$   $y_{00} = xy_0$   $y_1(0) = 1$   $y_{000} = 0$   $y_{0000} = xy_0$   $y_2(0) = 2y_1$   $y_1(0) = 0$   $y_{iv} = 2y_{0000}$   $y_{00000} = xy_{000} = 3y_1$   $y_3(0) = 3$ .

Selected Solutions, Section 5 - Whitman College  
 Selected Solutions, Section 5.2 For problems 2, 5, 6, 8 do not spend too much time finding the general term(s) of the series. The recurrence relations are typically as far as we'll need to go. In each of these problems, we take:  $y(x) = \sum_{n=0}^{\infty} a_n(x - x_0)^n$   $y_0(x) = \sum_{n=1}^{\infty} a_n(x - x_0)^{n-1}$   $y_{00}(x) = \sum_{n=2}^{\infty} n(n-1)a_n(x - x_0)^{n-2}$

Selected Solutions, Section 5.1 In problems 1-14

even, use the Ratio Test to find the radius of

convergence. 6. Use the Ratio Test:  $\lim_{n \rightarrow \infty} \frac{|x_{n+1}|}{|x_n|} = \lim_{n \rightarrow \infty} \frac{(n+1)!}{n!} = \lim_{n \rightarrow \infty} (n+1) = \infty$

The series converges absolutely if  $\lim_{n \rightarrow \infty} \frac{|x_{n+1}|}{|x_n|} < 1$ , and diverges if  $\lim_{n \rightarrow \infty} \frac{|x_{n+1}|}{|x_n|} > 1$ , so the radius is 1. 8. Use the Ratio Test:

$\lim_{n \rightarrow \infty} \frac{(n+1)!}{n!} = \lim_{n \rightarrow \infty} (n+1) = \infty$

our genetic algorithm will be sequences of 0's and 1's with a length of 5 bits, and have a range from 0 (00000) to 31 (11111). To begin the algorithm, we select an initial population of 10 chromosomes at random. We can achieve this by tossing a fair coin 5 times for each chromosome, letting heads signify 1 and tails signify 0.

Problem Set #5: Selected Solutions M367K: Topology I  
Problems in Munkres Section 18 1. Suppose  $f: \mathbb{R} \rightarrow \mathbb{R}$  is continuous in the  $\epsilon$ - $\delta$  sense; we want to prove  $f$  is continuous in the open set sense. Given  $V \subseteq \mathbb{R}$  open we must show  $f^{-1}(V) \subseteq \mathbb{R}$  is open. So for each  $x \in f^{-1}(V)$  we must find an open neighborhood  $U$  of  $x$  so that  $U \subseteq f^{-1}(V)$ , or equivalently  $f(U) \subseteq V$ . Now
