Simple Guide To Concrete Cube Testing

A comprehensive strength of concrete cube test provides an idea about all the characteristics of concrete. By carrying out the concrete cube test, concrete can be certified as compliant allowing clients to have confidence in its quality. Safety and reliability of concrete is the primary reason for the test.

A Quality Engineers Guide to Concrete Cube Testing

The cube mould should be clean and lightly oiled. It should be filled in 50 mm layers and compacted, with a steel tamping bar, with a minimum of 25 or 35 tamps per layer for a 100 or 150 mm mould respectively. After tamping each layer, the mould should be lifted slightly and dropped or the sides tapped, to close the top surface of each layer.
