~~Solutions, Colloids, and  
SuspensionsSolution  
Suspension~~

A solution is a homogeneous mixture of two or more components. The dissolving

# Get Free Solution Suspension

agent is the solvent. The substance that is dissolved is the solute. The components of a solution are atoms, ions, or molecules, making them  $10^{-9}$  m or smaller in diameter.

Colloids, and Dispersions~~

The key difference between solution and suspension is that the particles of a solution are invisible to the naked eye whereas the particles of the suspension

# Get Free Solution Suspension

are visible. In the natural environment, most of the substances exist as mixtures (E.g. air, water).

## Get Free Solution Suspension

A suspension is a mixture of liquids with particles of a solid which may not dissolve in the liquid. The solid may be separated from the liquid by leaving it to stand, or by filtration

# Get Free Solution Suspension

~~Mixtures, Solutions and  
Suspensions~~

Solutions and suspensions are both considered as mixtures. The key difference between solution and suspension is their particle size. Particles in a

## Get Free Solution Suspension

solution are much smaller than that of suspensions. Due to this difference between solute particles and suspension particles, there are distinct differences in the two systems.
