Stereochemistry of Organic Compounds (Eliel, Ernest L.; Wilen, Samuel H.) Article Views are the COUNTER-compliant sum of full text article downloads since November 2008 (both PDF and HTML) across all institutions and individuals. These metrics are regularly updated to reflect usage leading up to the last few days. Citations are the number of other articles citing this article, calculated by Crossref and updated daily.

Stereochemistry, a subdiscipline of chemistry, involves the study of the relative spatial arrangement of atoms that form the structure of molecules and their manipulation. The study of stereochemistry focuses on stereoisomers, which by definition have the same molecular formula and sequence of bonded atoms, but differ in the three-dimensional orientations of their atoms in space. For this reason, it is also known as 3D chemistry—the prefix "stereo-" means "three-dimensionality". An ...

Stereochemistry of Organic Compounds - GBV

Stereochemistry is the branch of chemistry that involves " the study of the different spatial arrangements of atoms in molecules". Stereochemistry is the systematic presentation of a specific field of science and technology traditionally requires a short preliminary excursion into history. Stereochemistry is the 'chemistry of space ', that is stereochemistry deals with the spatial arrangements of atoms and groups in a molecule.
