TemperaTure, pressure, LeveL and F
NIST uses a temperature of $20^{\circ} \mathrm{C}$ (293.15 K, $68^{\circ} \mathrm{F}$ ) and an absolute pressure of 1 atm (14.696 psi, 101.325 kPa ). This standard is also called normal temperature and pressure (abbreviated as NTP ). Please note that these stated values of STP used by NIST have not been verified and require a source.

Field instrumentation to measure and monitor flow, level, pressure, temperature and analyze liquids.
Depending on the application a field instrument is required to measure and control different automation processes. This is why our field instruments use different measuring principles to operate reliably and accurately in any situation.

$15^{\circ} \mathrm{C}\left(59^{\circ} \mathrm{F}\right)$ temperature,
101,325 pascals (14.6959 psi) (1 atm) pressure, and a density of 1.2250 kilograms per cubic meter (0.07647 lb/cu ft).

International Standard Atmosphere-Wikipedia and the given atmospheric pressure "at sea level" makes really no sense. In SI units with dry air at $20^{\circ} \mathrm{C}\left(68^{\circ} \mathrm{F}\right)$, the speed of sound c is 343 meters per second (m/s). This also equates to 1235 km/h, 1125 feet per second (ft/s or fps), 666 knots, 767.3 miles per hour (mi/h or mph), 12.79 miles per minute (mi/min), 0.2131 miles per second (mi/s),

- 

ISA (International Standard Atmosphere) and 1976 U.S.
Standard Atmosphere define air density at the standard pressure 1013.25 hPa and temperature 15 ${ }^{\circ} \mathrm{C}$ as $1.225 \mathrm{~kg} / \mathrm{m}^{3}$ or $0.0765 \mathrm{lb} / \mathrm{ft}^{3}$. Air density is affected not only by the temperature and pressure but also by the amount of water in the air.

Air Pressure, Density, and Femperature vs. Altitude in ...
NTP - Normal Temperature and
Pressure. NTP is commonly used as a standard condition for testing and documentation of fan
capacities: NTP - Normal
Temperature and Pressure - is defined as air at 200C (293.15 K, $680 F$ ) and $1 \mathrm{~atm}(101.325 \mathrm{kN} / \mathrm{m} 2$,

A centrifugal compressor is tested at sea level at a temperature of $70^{\circ} \mathrm{F}$ and a pressure of 14.7 psia . The rotating speed is observed to be $15,000 \mathrm{rpm}$. It is to be employed for use at high altitude where the ambient temperature will be $-15^{\circ} \mathrm{F}$ at 13.5 psia.
