The American Health Care Paradox: Why Spending More is ...

The American Health Care Paradox: Why Spending More Is Getting Us Less examines this phenomenon and argues that strategies to improve health in the United States have traditionally looked only at the health care system as the key driver of health and health outcomes. Authors Elizabeth Bradley and Lauren Taylor propose replacing the current paradigm, of investing directly into the medical system to improve health, with an increased focus on and investments in efforts that directly address ...

The American Health Care Paradox | Bioethics Journal

Nevertheless, available data indicate that Americans who are white, insured, college-educated, and upper income have poorer health than their counterparts in other industrialized countries. 1 There appears to be something uniquely American about spending more on health care and getting less health. The American health care paradox—the existence of high spending on health care and poor health—can be resolved when we step back to consider what it is that produces a healthy population.

American health care paradox-high spending on health care ...

The new math unraveled the paradox. If we add together what countries spend on health care and what they spend on social services, the United States' place in the ranking of industrialized countries shifts considerably. This sum of spending is what might be called the national investment in health.
