The corals of the Mediterranean A coral is a polyp which can live alone or in colonies and cover itself with a hard or soft exoskeleton, but its overall constitution is rather simple. The polyps are sac-like with radial symme-try and two layers of tissue: an external one called the ectoderm or epidermis, and an in-

The corals of the Mediterranean - Oceana
The Corals of the Mediterranean Occupying 1.1 percent of the surface of the world's oceans and 0.3 percent of all salt water, the Mediterranean no longer shelters the great coral reefs that thrived 60 million years ago. This is due to millennia of climactic and oceanographic changes.

The Corals of the Mediterranean | Oceana
Phyllangia americana mouchezii, the Mediterranean Stony Corals (a.k.a. the Hidden Cup Corals or the Dark Colonial Coral), are an azooxanthellate coral found along the eastern coast of the Atlantic Ocean and parts of the Mediterranean Sea, also including the Maltese Islands.

Red corals grow on rocky seabottom with low sedimentation, typically in dark environments—either in the depths or in dark caverns or crevices. The original species, *C. rubrum* (formerly *Gorgonia nobilis*), is found mainly in the Mediterranean Sea.

Precious coral - Wikipedia

A study in the Mediterranean showed that some corals, which seemed to have succumbed to the effects of global warming, managed to grow again, but for that they had to make some sacrifices. We know that corals around the world are in danger for a number of reasons. On the one hand because of the pollution by nitrogen.

In the Mediterranean, corals are "back from the dead"

L. glaberrima is a tall arborescent, bright orange or white, black coral species, among the most common black corals of the Mediterranean basin [22]. Occasionally found at 100 m, it forms dense forests only from 200 m along the rocky bench terraces [23, 24, 52, 60] or among white coral reefs [14, 61].

Deep Gorgonians and Corals of the Mediterranean Sea ...

Off the coast of Italy, researchers led by Giuseppe Corriero of the University of Bari Aldo Moro have made a surprising discovery: in the Adriatic, in front of the town of Monopoli in Puglia, they found a 2.5-kilometer-long coral reef at medium depths of 30 to 55 meters. Of course there are corals in the Mediterranean, that's nothing new.

How coral transplants could rescue Turkey's threatened ...

A marine heatwave is a short period of abnormally high temperatures in a sea or ocean. Last month, in some areas of the Mediterranean, the water's temperature was 2, 3, or even 4 degrees above average. Warmer water causes physiological stress and increases microbe virulence in corals, eventually leading to the animal's death.

Marine heatwaves: a death-sentence for corals in the ...

The combined biodiversity censused so far for Mediterranean cold-water coral habitats and those of adjacent areas (Strait of Gibraltar-Gulf of Cádiz) includes a conspicuous number of species (ca. 520 spp.) with a high representation of sponges (ca. 90 spp.), polychaetes (ca. 90 spp.), cnidarians (ca. 80 spp.), bryozoans (ca. 75 spp.), crustaceans (ca. 60 spp.), molluscs (ca. 50 spp.), fishes (ca. 50 spp.), echinoderms (ca. 20 spp.) and brachiopods (7 spp.).
