UPNE - The Cycle: Michael M. Kaiser

The proposed monitoring cycle discussed above provides a practical road map for informing performance decision-making. We would suggest that viewing external workload, internal workload, perceptual well-being and readiness to train/compete data in combination provides more meaningful individual training prescriptions than making interpretations based on data from any single athlete

What you need to know A
67 year old woman with no
significant medical history
required urgent orthopaedic
surgery after a fall. In
preparation, her bloods were
collected and a random cortisol
was requested, which came back
at 763 nmol/L. She did not have
diabetes or hypertension. The
anaesthetist reviewed and
commented: "High cortisol, not
safe for surgery until further
evaluation."
