The sinuous element described here was designed for the 1.0GHz - 2.5GHz frequency band. Simulated and experimental results of the antenna performance are presented. lFirst conceived by R. H. Du Hamel, "Dual Polarized Sinuous Antennas." European Patent Application 019 8578, filed Feb. 19, 1986.

~~THE SINUOUS ANTENNA A DUAL POLARIZED ELEMENT FOR WIDEBAND ...~~

In this paper, design, construction and measurements of planar sinuous antennas are investigated for 1-5 GHz frequency range. Feeding sections of this antenna are realized by using microstrip tapered baluns. We have determined the microstrip tapered balun dimensions using Ansoft HFSS-simulation program.

~~The sinuous antenna A dual polarized feed for reflector ...~~

3. Design and fabrication of the sinuous antenna. The requirement of dual polarization dictates the need to have two equivalent structures, each corresponding to one sense of polarization. This is done by first generating one set of "arms" to achieve a linear polarization.

~~The sinuous antenna A dual polarized feed for reflector ...~~

Sinuous Antennas. COTS. Dual Linear. Dual Circular. Polarised. COTS and custom designed Dual Linear and Dual Circular Polarised, sinuous antennas for direction finding, ELINT, RWR and ESM airborne, sea and ground-based applications. The Steatite family of sinuous antennas simultaneously handle signals of any two orthogonal linear polarisations and simultaneous left and right-handed circular polarisations dependent on antenna design.

~~Sinuous Antennas | High Gain Sinuous Antennas | Steatite~~

L3Harris is the world-class leader in dual polarization sinuous antenna design. The sinuous antenna has the capability of simultaneously handling radio frequency signals of any two orthogonal polarizations on two isolated output ports. Our dual polarization sinuous provides near 100% probability of intercept over a broad field of view. This gives us the ability to provide an antenna custom built to your specifications.

~~Dual Polarization Sinuous Antennas | L3Harris™ Fast, Forward.~~

The sinuous antenna eliminates this limitation and provides an all-polarization capability which can respond to either dual circular polarizations or dual linear polarizations. Furthermore, this capability is provided with greater precision than the spiral and in a similarly sized package. BACKGROUND

The sinuous antenna has been designed to achieve better performance compare to spiral antenna having same size. It has capability to sense circular polarisations of both types viz. RHCP and LHCP simultaneously. Hence it is also known as "Dual polarised sinuous antenna". It is specific type of log periodic antenna.

AB - In this work a low-profile cavity-backed dual linear polarized sinuous antenna with integrated baluns has been studied. The antenna was chosen to operate from 1.6 GHz to 7 GHz having an input impedance of 250 ω with dual linear polarization. The sinuous antenna design guarantees a relaxed fabrication tolerance compared to the log-periodic sinuous antenna. The sinuous antenna is backed with a metallic cavity to achieve a unidirectional radiation pattern.

~~Cavity backed dual linear polarization sinuous antenna ...~~

To the spiral antenna, the sinuous antenna is a good alternative. It shares many of its features: it is planar, broadband and presents two lobes. On the other hand, while spirals have a circular polarization, sinuous antennas exhibit a linear polarization in their two- arm version, and dual linear polarization in their four arms version.

~~OPTIMAL WIDE BAND SINUOUS ANTENNA BASED ON DUAL POLARIZED ...~~

The sinuous antenna is backed with a metallic cavity having a low profile of 30 mm. The antenna is working with two orthogonal linear polarizations and fed with two linearly tapered microstrip Baluns. The Baluns are placed horizontally parallel to the radiating elements for size utilization.

~~Dual Linearly Polarised Sinuous Antenna 0.7 to 4 GHz~~

Abstract-A novel wideband four-arm sinuous antenna with dual circular polarizations and unidirectional radiation is proposed. Different from the conventional designs, this presented sinuous antenna is realized in a conical form and no absorptive cavity is needed to obtain unidirectional radiation.

~~Kent Academic Repository~~

The sinuous antenna is a planar, broadband, dual polarized structure that is functionally similar to a LPA. The sinuous design, patented in 1987 by R.H. DuHameI(6), is used primarily to replace single polarized flat planer spiral antennas in electronic warfare applications.
