Thermodynamics sounds intimidating, and it can be. However, if you hone in on the most important thermodynamic formulas and equations, get comfortable converting from one unit of physical measurement to another, and become familiar with the physical constants related to thermodynamics, you'll be at the head of the class.

Zeroth law of thermodynamics  If two thermodynamic systems are each in thermal equilibrium with a third, then they are in thermal equilibrium with each other. First law of thermodynamics  Energy can neither be created nor destroyed. It can only change forms. In any process, the total energy of the universe remains the same.
