students researching tissue replacement and restorations; as well as students of biology medicine and life science working with primary and complex cell biology.

Palsson & Bhatia, Tissue Engineering | Pearson

Tissue engineering is a complex and emerging field of study that combines basis biological sciences (molecular, cell, and tissue biology and physiology), engineering fundamentals (fluid mechanics, transport phenomena, materials science, chemical kinetics), clinical aspects (surgery, transplantation, immunology, pathology, radiology) and biotechnology (cell culture, cell separations, gene transfer).

A volume in the new Principles and Applications in Engineering series, Tissue Engineering provides an overview of the major physiologic systems of current interest to biomedical engineers: cardiovascular, endocrine, nervous, visual, auditory, gastrointestinal, and respiratory. It contains useful definitions, tables of basic physiologic data, and an introduction to the literature.
