a mathematical sentence in which the expression on the left side of the equal sign has the same value as the expression on the right side of the equal sign. substitute. in algebra it means putting numbers where the variables are. If you have 'x - 2' and you are told that 'x ...

Unit 5 - Equations and Unit 6 - Inequalities Flashcards ...

?6 < 6?2x < 12. Now subtract 6 from each part: ?12 < ?2x < 6. Now divide each part by 2 (a positive number, so again the inequalities don't change): ?6 < ?x < 3. Now multiply each part by

?1. Because we are multiplying by a negative number, the inequalities change direction. $6 > x > ?3$. And that is the solution!

Heitfield,Jessica (Math) / Unit 2: Absolute Value

I don't want to make a careless mistake there. And then divide both sides by 2. You get, in this case, x is greater than-- you don't have to swap the inequality, because we're dividing by a positive number-- negative 58

over 2 is negative 29, or, here, if you divide both sides by 2, or, x is less than negative 34. 68 divided by 2 is 34.
