intermediate microeconomics

The best way we know to find answers is to
“ think and doodle. ” Draw some axes on
scratch paper and label them, then mark a
point on your graph and ask yourself,
“ What other points on the graph would
the consumer find indifferent to this
point? ”

Workouts In Intermediate Microeconomics Answer Key

The answer is $u(x) = -e^{-rx}$, or any affine transformation of this. If relative risk aversion is constant, the differential equation is $u'(x)x/u(x) = -r$. The solution to this is $u(x) = x^{1-r}/(1-r)$ for $r \neq 1$ and $u(x) = \ln x$ for $r = 1$.^{11.3} We have seen that investment in a risky asset will be independent of wealth if risk aversion is constant.
