An operations profile method (ISA-95 Part 8, Manufacturing Operations Profiles, Working Draft 02) defines the reusable operations event definitions across messaging implementations. An operations profile represents a description of the information exchange semantics for the scope of a defined process, workflow, industry, and corporate scope (Levels 2, 3 and 4).

ISA-95 evolves to support smart manufacturing and IIoT - ISA
ISA-95 defines 4 levels in industrial companies. Level 0, 1 en 2 are the levels of process control. Their objective is the control of equipment, in order to execute production processes that end in one or more products. Level 3 could be called the level of MES (manufacturing execution system) activities.

Technical: ISA-88 and ISA-95 - ISA 95
ISA-95 defines the software interface between enterprise and control systems. Specifically, it defines semantics and operational models for how industrial control systems -- also called manufacturing execution systems -- exchange information with enterprise resource planning applications.

ISA-95 for IIoT gives architects a standard for integration
ISA-95 has served as a useful standard for manufacturers for many years. However, when technical experts try to fit industrial IoT into already standard-compliant manufacturing systems, strict adherence to ISA-95 is neither necessary nor sufficient.
