---

## How to remove Active Directory in Windows Server 2008

Active Directory is a directory service developed by Microsoft for Windows domain networks. It is included in most Windows Server operating systems as a set of processes and services. Initially, Active Directory was only in charge of centralized domain management. However, Active Directory became an umbrella title for a broad range of directory-based identity-related services. A server running Active Directory Domain Service role is called a domain controller. It authenticates and authorizes all
